

THE GREEN
cabin

Dish Gel

Breakthrough bio-enzyme dishwashing liquid which treats fat traps and septic systems, while ridding building plumbing pipes of organic build ups for huge cost savings. Eliminates odours from drains and dish cloths, while leaving dishes sparkling clean.

How to use:

- **Hint:** Best transferred into pre-used detergent bottles with squeeze tops or pump. It's also a very thick gel, so be patient, it takes a while to transfer. Use a wide funnel.
- As this is a natural detergent, so foaming levels change slightly based on the raw materials.
- Use undiluted.

THE GREEN cabin

Introduction:

The Green Cabin Dish Gel is a breakthrough concept for the humble dishwashing liquid. State of the art bio-enzyme technology solves a multitude of problems faced by building owners the world over. In 2009 the company conclusively proved the massive cost savings and numerous benefits of its proprietary bio-enzyme daily cleaning technology at 2500 buildings nationwide.

Now with our proprietary fat digesting bio-enzyme technology garnered from years of grease elimination experience in fat trap and plumbing applications, the ubiquitous task of washing dishes results in amazing new benefits to property owners and the environment!

Environmental Benefits:

Blockages caused by fats at pump stations the country over results in enormously damaging sewer overflows into our precious rivers and oceans. The environmental cost is tragic, and it poses grave disease threats in the form of typhoid and cholera outbreaks.

In November 2016, a ground-breaking technology, Pump Station Gobbler™ was showcased *at the request of government* at the Nelson Mandela Bay at the notorious Rudolph Street Pump Station in the Eastern Cape.

Their fat problem was eliminated in an unbelievable 4 days! This proprietary bio-enzyme technology is now included in our Dish Gel.

Just imagine – helping to save the country’s sewer problems just by changing your dishwashing liquid brand!

Product Description:

The Green Cabin Dish Gel is a very powerful blend of eco-friendly bio-enzyme grease cutting agents with a neutral PH that is soft on the skin.

THE GREEN cabin

With the awesome power of bio-enzymes, you get the very cleanest dishes and cutlery on even the toughest food stains.

Through Competitive Exclusion, TheGreen Cabin Dish Gel keeps dishes clean and free of harmful pathogens for days after washing!

Fat Trap Savings:

The old-fashioned way of maintaining grease traps is with a sewerage sucking truck. This smelly and unsightly presence is highly undesirable at corporate premises and kitchens, not to mention *very* expensive.

It's not eco-friendly either, with the diesel carbon footprint of driving to and removing fats from your premises. And even though the fats are "out of sight, out of mind", what then happens to them? Our precious environment still sits with the problem. Dish Gobbler™ simply solves these problems and remediates onsite!

Septic Tanks & Sewer Lin

Every time you wash dishes, a powerful dose of beneficial micro-organisms is released into plumbing and sewer lines, turning the plumbing works into a giant living ecosystem.

These micro-organisms secrete enzymes to permanently digest organic waste. They have a hugely beneficial effect on septic systems, septic tanks soakaways and sewer plants. Fats and solids are permanently broken down into carbon dioxide and water.

Septic tanks require far less manual cleaning and expensive waste removal, while septic and sewer plants are aided with sludge breakdown.

THE GREEN cabin

Highly Economical:

The Green Cabin Dish Gel is extremely concentrated, and just a tiny amount cleans an entire sink full of soiled dishes and cutlery.

It contains highly advanced foaming agents which remain stable and do not break as the grease loading of plates and cutlery is increased.

This results in a dramatically lowered consumption of product, on a daily basis, for excellent long-term cost savings.

A Tender Specification:

Simply making Dish Gel the standard specification for your organization guarantees all the aforementioned benefits!

For Best Results:

Use with The Green Cabin's full range of bio-enzymatic products which benefit each other as you use them.

Save money and improve performance while reaping multiple benefits compared to traditional chemicals.

Avoid using disinfectants and harsh chemicals, these kill our beneficial micro-organisms and harm the environment.

Packaging, Shelf Life, Storage

Stable for 12 months at ambient temperature, out of direct sunlight. Available in 5L, 25L & 1000L flow bins. Super concentrate available for simple self-manufacturing while saving greatly on shipping costs.
